National Strategy of Artificial Intelligence (ENIA)

ENIA (National Strategy of Artificial Intelligence) - Strategic Axes

National Plan for Language Technologies

Measure/Action 14 in ENIA (National Strategy of Artificial Intelligence)

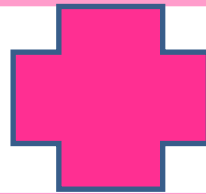

National Plan for Language Technologies (PNTL)

Key points:

- *Collaboration with Public and Private Organizations (RAE, CSIC, BSC, BNE,...)*
- *Main strategies:*
 - *Energizing the sector with access to corpus, models and infrastructure.*
 - *Offering more efficient and inclusive services in the Public Administration.*
 - *Creating resources and solutions for public and private organizations.*

National Plan for Language Technologies

SEDIA launched at 2018 a Plan for Language Technologies (Plan-TL)

SEDIA is developing the new National Plan for Language Technologies (PNTL)

To give continuity to the initiatives under the Plan-TL

To address the evolution and importance of AI

To focus on several key dimensions: access to data, language modelling with minimised biases, and human resources training on TL

National Plan for Language Technologies & Intelcomp

PNTL - AXIS II: REFERENCE ACCESS POINT

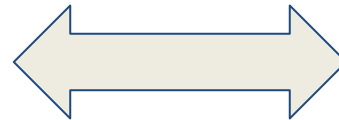

Reference Access Point for language resources which will include a catalogue of corpora and models.

The inclusion of the category of linguistic data as high-value data will be promoted as part of open data policies, ensuring strong data governance

Intelcomp will be offered, from the **BSC infrastructure**, as an online AI-based platform for improving the design, implementation, monitoring and evaluation of public policies

The future of IntelComp

- Within the framework of the PNTL, and in order to ensure the continuity of the project, Intelcomp has been included in the Language Modelling Initiative to be led by the BSC-CNS.
- In this respect, the **BSC-CNS** will be in charge of:
 - **Maintenance of existing infrastructure for small-scale use case development.**
 - **Code support and support for open issues on GitHub.**
 - **Develop installation guides and user manuals for the development of unbiased models in line with the AIAct.**
- **Address the feasibility of generating a sectoral monitoring application to assist in the management of public policies by analysing the fields of application of the services and products contracted (ICT, defence, construction, etc.):**
 - **Government procurement**
 - **R&D&I**

Thank you very much!
